

Opening Statement

Our goal is to support the Nigerian military with practical, scalable solutions that strengthen readiness today while building long-term national capability.

Short-Term Wins

Immediate support in hardware selection and supply chain stabilization.

Mid-Term Collaboration

Joint problem-solving with commanders to address operational challenges.

Long-Term Vision

A Nigerian defense-industry ecosystem built on engineering, design, and manufacturing.

Closing Statement

We want to be a dependable partner in Nigeria's modernization journey starting with support today and growing into full indigenous capability tomorrow.

Purpose of Engagement

To provide the Nigerian Armed Forces with practical, scalable, and modernization-aligned support across communications, protection, surveillance, mobility, and long-term defense industrialization.

1. Short-Term Support

Objective: Provide immediate, practical assistance that strengthens operations with minimal or no structural change.

A. Consultation on Selection of Military Hardware - Hardware consultation

- Offer expert guidance on choosing reliable, mission-appropriate equipment.
- Focus on non-weaponized, high-impact categories:
 - Radios
 - Body armor
 - Tactical uniforms
 - Vehicles
 - Surveillance tools
- Provide comparison matrices, technical specs, and suitability assessments.

B. Supply Chain Solutions for Military Hardware - Supply chain solutions

- Build a streamlined procurement pipeline for vetted equipment.
- Identify trusted OEMs and regional suppliers.
- Offer logistics support for importation, warehousing, and distribution.
- Implement traceability and quality-assurance systems.

2. Mid-Term

Objective: Identify operational gaps and co-develop tailored solutions. Also, address deeper operational challenges and begin capability expansion.

A. Identify Operational Roadblocks, Concerns, and Operational Issue Mapping

Operational gap analysis - Structured sessions with commanders to uncover challenges in communication, mobility, surveillance, maintenance, and soldier protection

- Conduct structured listening sessions with unit commanders.
- Map operational pain points:
 - Communication gaps
 - Mobility limitations
 - Surveillance blind spots
 - Equipment fatigue
 - Maintenance challenges
- Develop tailored solutions for each operational domain.

B. High-Level Munition & Capability Requirements

Capability requirements - Safe, non-operational discussions on capability needs for drones, aircraft, detection systems, and mission-specific technical specifications.

Examples of safe discussion topics:

- What drones are needed for ISR, logistics, or surveillance
- What aircraft capabilities (range, endurance, payload) are required for missions
- What missile-defense detection systems (non-weaponized) are needed
- What technical specifications matter for procurement decisions

This allows you to help the military define purpose-based requirements without crossing into restricted operational guidance.

3. Long-Term Support

Objective: Position your defense startup as a strategic partner in Nigeria's modernization journey.

A. Design, Engineering & Manufacturing Military Hardware

Defense manufacturing roadmap - Develop local production capacity for tactical vehicles, communication systems, surveillance platforms, protective gear, and field equipment.

- Develop indigenous capability for non-weaponized systems:

- Tactical vehicles
- Communication systems
- Surveillance platforms
- Protective equipment
- Field gear
- Establish engineering partnerships with universities and research centers.
- Build local assembly and maintenance hubs.
- Support Nigeria's long-term goal of defense industrialization.

B. Strategic Partnership Model

Long-term defense partnership - Joint R&D programs, technology transfer, local workforce development, and multi-year modernization collaboration.

- Multi-year collaboration with Nigerian Army leadership.
- Joint R&D programs.
- Local workforce development.
- Technology transfer agreements.

4. Key Value Proposition

- **Rapid Deployment:** Solutions deliver immediate operational impact.
- **Cost-Effective Modernization:** Non-weaponized systems reduce procurement complexity.
- **Local Capability Building:** Supports Nigeria's long-term defense industrialization goals.
- **Interoperability:** Designed to integrate with existing Nigerian Army platforms.

5. Closing Position

Our startup aims to be a trusted modernization partner, providing immediate support today, solving operational challenges tomorrow, and building Nigeria's indigenous defense capability for the future.
